# THE ALL-NEW TOTAL CALIBRATION TRACKING SOFTWARE SOLUTION

Calibration Recall is an **effective, Multi-user-friendly** solution for managing calibration and maintenance processes throughout your organization.

In any industry that utilizes complex machinery, the correct calibration and re-calibration of critical equipment and tools is critical to **ensuring safety, uniformity, and productivity.**

**REDUCE DOWNTIME** – There is nothing worse than halting production because a tool is out of service for calibration. Through the proper planning and advanced notification, you can schedule tool calibration during off-peak hours.

**MAINTAIN EQUIPMENT HISTORY** – Every piece of equipment has a unique life span that must be documented. Historical information is essential for tracking status, evaluating future performance, and meeting audit requirements.

**ASSESS YOUR RISK** – When a tool is found out of tolerance, you can identify affected product and determine whether the suspect tool could have allowed defects to pass.

**CUSTOMIZABLE REPORTING** – Create custom list and detail reports on your data. Easily define your own reporting criteria, upload your company logo and produce your own custom reports.

**CUSTOM FIELD MANAGEMENT** – Add and manage your own custom fields, allowing you to extend Gages, Risk Notifications and Users to fit your business needs.

**EQUIPMENT BARCODE SCANNER** – Use your Device(s) camera to scan a barcode and access your Gages from anywhere in the world.

**TRACK CALIBRATED GAGES, INSTRUMENTATION AND EQUIPMENT** from all your devices!  
- Ensure compliance and accountability easier than ever before.

**ALREADY USING CALIBRATION RECALL FOR WINDOWS?** We've made migrating easy!  
- Just download our migration app, login and we'll take care of the rest.
