HQMS Enterprise

MODULES

Calibration

Automate the processes of checks and balances for your equipment. Oversee, report on, track, and manage all calibration activities throughout the life expectancy of any tool or machine.

Document Control

Manage your documents online, anytime, and from anywhere in the world. HQMS' Document Management provides access to controlled and uncontrolled based upon user criteria. The integrated revision and approval processes ensure the most recent documents and specifications are readily available to your workforce at a moment's notice.

Non-Conformance

Allows you to manage all non-conformances in one centralized application. Track customer complaints, internal audit findings, warranty claims, dispositions, and supplier issues so that nothing falls through the cracks.

Corrective Action

Supports multiple CAR processes. Designate team members, define and contain issues, and determine then verify root causes. Implement interim and permanent corrective actions while simultaneously validating their effectiveness.

Audits

Provides auditors with a powerful, yet easy to use set of auditing tools, allowing them to design audit checklists, templates, and workflows on the fly. Support your audit activity before, during, and after completion, ensure compliance, and track audit findings as needed.

Training

Manage employee training standards and qualifications by designing, and implementing employee training courses. Simplify, track, report on, and alert management when employee training is coming due. Ensuring your workforce has been trained and is up to date with the latest standards and specifications has never been easier.

Project Management

Manage, implement, and track internal and externally related projects ranging from A to Z. APQP, NPI, and EH&S are just a few of the project types that HQMS' Project Management can accommodate. Describe the project, identify tasks, document task completion, and record all necessary steps required to complete each project.

PPAP

The HQMS' PPAP application provides users with the ability to document communication between facility, and supplier. PPAP originators begin the approval process by selecting a submission level and the elements they require from suppliers, suppliers weigh in, the process is then tracked and managed to completion.

Risk Management

Document, analyze, and track the mitigation of risks. Describe a potential risk, assign analysis responsibility, and rate risk likelihood and severity. Risk controls and their implementation helps to mitigate potentially negative factors of any identified risk.

SUPPORT TOOLS

Document Library

Allows user licensed access to documents without having to login to the HQMS application. Users can view or download documents residing in the application. Document links can be copied and pasted into emails, or into other documents as well.

Com-Port

Serves as a communication portal, allowing customers, clients, suppliers, and business partners to directly interact with HQMS from the outside.

Reference Systems

Contacts, Customers, Suppliers, Locations, Tasks, Groups, and Users are just a few of the included systems within the base HQMS system.
